Office Visit Note

Riverbend Gastroenterology Associates (DEMO) Visit date: 10/22/2026 Provider: Avery Sampleton, MD
Patient: Jordan Q. Testpatient DOB: 04/12/1979

REASON FOR VISIT

Follow-up of moderate ulcerative colitis with persistent symptoms despite current therapy. Discussion of advancing to vedolizumab infusion.

HISTORY

Diagnosed with ulcerative colitis in 2021. Prior mesalamine with partial response. Reports 4-5 loose stools daily with intermittent blood over the last six weeks. No fevers. Weight stable at 162 lb. No known drug allergies. (Synthetic history.)

ASSESSMENT

Ulcerative colitis, moderate activity (K51.90). Candidate for vedolizumab induction per standard dosing. Labs reviewed; CRP and fecal calprotectin elevated.

PLAN

1. Refer to infusion center for ENTYVIO 300 mg IV at weeks 0, 2, 6 then every 8 weeks. 2. Pre-medicate with acetaminophen and diphenhydramine. 3. Continue mesalamine. 4. Return visit in 10 weeks or sooner if symptoms worsen.
